Our trained and certified staff are committed to delivering exceptional results.

### ECO-FRIENDLY APPROACH

We are committed to protecting the environment, using sustainable practices and non-toxic cleaning agents.

### CUSTOMISED SOLUTIONS

Our services are tailored to meet your specific cleaning needs and requirements.

### STATE-OF-THE-ART EQUIPMENT

We use the latest cleaning technologies to deliver immaculate results.

### INDUSTRY EXPERTS

50 years + in the industry.

## HIGH REACH WINDOW CLEANING

Window cleaning has been revolutionised with the innovative use of deionised or pure water-fed pole technology, capable of extending up to 6.63 meters. This cutting-edge method ensures that windows are cleaned without the need for any chemicals, relying solely on pure water to deliver outstanding results. This not only represents a commitment to environmental sustainability but also offers a highly efficient solution for crystal-clear, streak-free windows.

## SOLAR PANEL CLEANING

Boost your solar panels' performance with an eco-friendly cleaning method that uses pure water. This innovative approach ensures a streak-free finish without manual wiping, leaving your panels spotless. Advanced ground-level techniques streamline the process, reducing the need for ladders and enhancing safety. Regular maintenance significantly boosts solar yield, optimising energy output and maximising your return on investment.

## KITCHEN DEEP CLEANING

Ensure a safe and compliant kitchen with our deep cleaning solutions, helping you meet local regulations and auditor demands. Our thorough kitchen extraction system cleaning aligns with SANS1850 standards, reduces fire risks, and satisfies auditor expectations. We also provide expert fat trap cleaning services for regular removal and responsible disposal of grease, preventing blockages and ensuring compliance with effluent discharge standards.

## CARGO & CONTAINER CLEANING

Keeping cargo and reefer containers clean is crucial for transporting goods safely, especially in the food industry. Exterior cleaning involves pressure washing to remove dirt and stains. Interior cleaning removes residues, mold, and contaminants with eco-friendly, food-safe products. Surfaces are then disinfected to eliminate harmful microorganisms. This thorough process ensures containers remain safe and prevent spoilage or health risks.

## EXPERT CARPET CLEANING

Sanitech offers advanced carpet deep cleaning technology that is efficient, precise, and eco-friendly. Our high-speed extraction system cleans up to 900 square meters per hour with minimal disruption due to its quiet operation and ensures a quick 30-minute drying time. Using Global Green Tag PHD certified Bio-enzyme and friendly bacteria technology, we effectively remove dirt, odors, allergens, mold, and fungi, enhancing air hygiene and ensuring client health and safety.

## ANCHOR BOLT TESTING

Our anchor bolt testing services are essential for ensuring equipment safety and compliance with South African regulations. Regular testing identifies potential issues, preventing accidents and mitigating legal risks. By scheduling annual tests, you secure your workplace and fulfill both legal and moral obligations. Trust our professional team to keep your operations safe and efficient.
